I. Function Introduction:

1. Ultrasonic

Ultrasonic utilizes sonic vibrations; it works one million times per second. The ultrasonic wave could stimulate skin tissue and improve permeability of the membrane to promote collagen tissue, reduce wrinkles and invisible fine lines, also lift the skin for a younger and healthier look. Ultrasonic generates frictional heat which accelerates blood circulation, muscle relaxation, and decomposes cellulite to break down excess fat.

2. Skin Scrubber

With Ultrasonic Scrubber begins a new generation of aesthetic soft peeling. Using the high performance of ultrasounds, this exciting cosmetic breakthrough provides a safe, painless and perfect physiological skin regeneration. By removing the superficial scaly layers of the skin, the Scrubber stimulates the revival of the skin tissue, rendering it youthful and luminous from the first treatment. The top of the metallic probe produces extremely rapid moments at a very low amplitude when it is exposed to ultrasound vibration. This ultrasonic emission has a spectacular effect on water molecules, which are pulverized. This phenomenon is known as micronization.

3. High Frequency

Use high-frequency current and infrared ray to diminish inflammation and ease pain. The generated ozone kills bacteria, heals and astringes the acne vulnus. It has an effect on regulating sebum secretion, improving the texture of skin, accelerating blood circulation and speeding up metabolism, anti-wrinkle and anti-aging.

4. Mole Removal Pen

By means of coagulation of high-frequency electric current, it urges the cell necrosis of the epidermis, which can thoroughly eliminate all kinds of spots on the face and the other skin surface.

5. Bio

Skin tightening after cellulite and fat breaking down; Lifting up, for example, faces, breasts, hips and etc.
