MY-12101B

Preface

To our valued users,

Thanks for choosing our MY-12101B laser fat-dissolving machine which can strongly dissolve fat and slim body. It has an evident effect on body shaping and weight loss with fat-dissolving. And it applies high-tech and achieves body sculpting safely and effectively. Laser fat-dissolving machine is a professional beauty equipment for body slimming and weight reduction, which needs to be operated by people with professional training. Any improper use of this equipment may bring adverse consequences to human body, thus we advise all the people to read this manual thoroughly and follow the instructions specified hereby strictly before operation.

We believe our quality product will give you a good return, and our perfect after-sales service will make you worry-free.

Thank you.

Part I

Brief Introduction

At present, laser fat-dissolving machine of 5nw is the most popular equipment for weight loss and body slimming. It can effectively replace body weight reduction programs in beauty salon, and can be operated easily, conveniently and swiftly, and solves body problems for people pursuing beauty. Moreover, this equipment works safely and effectively, and requires no injection, no medication and no surgery. It has no side effects, and is operated externally throughout, and has an instant effect. Laser is of strong penetrating power which can effectively activate or repair fat cells, penetrate fat layer, and dissolve subcutaneous fat by heating. The treatment method is safe, painless and has no side effects.

Advantages

1. Laser strongly dissolves fat and has an evident effect.
2. It asks for no operation and anesthesia.
3. It's comfortable and painless during treatment. And it requires no convalescence, and will not affect work after treatment.
4. No consumption, low cost, but with quick return.
5. Unevenness, bleeding and swelling will not occur.
6. Laser lipolysis, which is safe and painless, dissolves fat evenly, makes skin smooth and flat, and leaves no marks.
7. Laser wavelength can penetrate fat layer, and dissolve subcutaneous fat by heating which then will be absorbed and discharged through natural body metabolism.

Principle

It uses red laser, a visible spectrum with a wavelength of 635nm-650nm. The wavelength of the laser is of strong penetrating power which effectively activate and repair fat cells, penetrate fat layer, and dissolve subcutaneous fat by heating. The treatment method is safe, painless and has no side effects. It sends low level chemical signal of laser energy to fat cells, and decomposes triglycerides stored in fat layer into free fatty acids and glycerol that are released through the channel of cytomembrane. Fatty acids and glycerol are transported to body tissue that produce metabolic energy. The release of fatty acids is a natural response when body needs the stored energy reserves, thus no unnatural reaction will occur inside body, nor does it affect or damage surrounding structures as skin, blood vessels and peripheral nerves. After a period of time of exercise therapy, the free fatty acids inside body will be eliminated through intact metabolism.

Biological Effect: LED laser uses laser of a wavelength of 635nm to 650nm which heats up fat cells in the targeted zone to decomposes them. And fat deposits is absorbed and discharged via body's natural metabolism in a short period of time. During the process, laser seals small blood vessels, obviously reduces bruises, leads the heat to treatment area, and stimulates the production of collagen, thus achieving smoothness, tightening and body shaping.

Low-energy laser(biological stimulation) directly reaches to deep fat. It stimulates biological cells and induces or strengthens a series of physiological reactions by providing a proper amount of energy, including promoting local blood circulation, regulating cell functions, enhancing immune function and facilitating cell metabolism. It can tighten skin, remove wrinkles, reduce fat, and shape body simultaneously. Laser is of strong penetrating power which can effectively activate or repair fat cells, penetrate fat layer, and dissolve subcutaneous fat by heating. The treatment method is safe, painless and has no side effects.

By using the latest non-surgical, non-invasive laser fat decomposition technique, it releases laser energy of low level which produces a chemical signal among fat cells that will dissolve the trioxide triene storing in body into free fatty acid, glycerin and water molecules. And this is a natural reaction when body needs the reserved energy. Then the free fatty acids are transported into the whole body through lymphatic system to supply energy to it. It's just like what the body would respond when it's short of heat.

Fix body sculpture result-laser photon

Laser photon emits low levels of laser energy, which creates a chemical signal in the fat cells, breaking down the stored triglycerides into free fatty acids, glycerol and water molecules, the same natural response initiated by the body anytime it needs to use its stored energy reserves

laser energy irradiates fat cells after penetrating skin

laser energy irradiates adipocytes

pores have formed on the adipoc allowing water, glycerol and free fatty acids move out into interstitial space to spill out

more water, glycerol and free fatty acids spill out

adipocytes significantly reduced in size while blood vessel unaffected

Effects

1. Dissolve fat cells and speed up metabolism.
2. Reduce and dissolve fat, and eliminate obesity.
3. Improve skin's slackness and aging, and firm and sculpt body.
4. Tighten skin and make it elastic.
5. Dissolve fat and build perfect body curve.
6. Sculpt A4 waist, slender legs and booty.

Indications

1. Those who always sit resulting in pear-shaped figure.
2. Those with flabby arms.
3. Those with extensive fat accumulation between the outer side of buttocks and thigh.
4. Those whose skin start to become slack or saggy.
5. Those whose obesity are the result of eating and drinking too much.
6. Those with slack abdomen, protruding small belly, obese waist or striae atrophicae after child delivery.

7. Those whose waist and abdomen have flab, or with swim ring-like waist.
8. Those whose buttocks show an outward expansion, or with redundant fat or flab.

Contraindications

1. Women in pregnancy, or lactation.
2. Those with heart disease, or heart pacemaker.
3. Those with unhealed surgical wound, or in surgical recovery.
4. Those with epilepsy, severe diabetes or hyperthyroidism.
5. Those with malignant tumors, hemophilia or severe bleeding.
6. Those with skin disease or infectious disease.
7. It's prohibited to use it around body parts with metal, plastic or silicon implants.
8. Those who have been taking anticoagulant drugs, vascular dilation drugs, or corticosteroids for a long time, or are taking now.

Matters Needing Attention After Treatment

1. Keep warm, don't eat cold food, and avoid exposing to windy environment and catching a cold.
2. Take shower after 4 to 6 hours.
3. Drink more warm water to speed up metabolism.
4. Refuse eating and drinking too much, as well as staying up late.
5. Avoid eating raw, cold and spicy food. But have enough sleep.
6. Avoid wearing crop top, backless clothes, miniskirt and minishorts.

Start/ Pause

Energy Level Display for Large Laser Pad

Energy Level Display for Small Laser Pad

Energy Level Setting

Laser pad on the left side is for adjusting the whole row of laser pads. If only adjust single laser pad, click the laser pad first, then press energy level setting button to adjust its level.

Mode Selection for Laser Pad

Continuous working mode(Laser pads will on all the time, suitable for people who just started to use it or use it for the first time.)

Discontinuous working mode(Laser flashes slowly, suitable for people want to maintain and reinforce body shaping.)

Fast flashing mode(Laser flashes quickly, suitable for people who want to reduce weight effectively.)

Energy level should be set from low to high gradually, and be set to a level that best suits body Energy.

2. Technical Parameters

Energy Output: 88 x 5mw

Mains Power Output: 100VA

Classification: Electrical Class 1, Type B Applied Part

Cooling Requirement: Air Cooling

Voltage Requirement: 100v-240v

3. Contraindications

Those with the following situations should use the equipment with caution. Please consult a doctor or professional before using it. The details are as follow:

- (1) Women in pregnancy, or lactation.
- (2) Those with heart disease, or heart pacemaker.
- (3) Those with unhealed surgical wound, or in surgical recovery.
- (4) Those with epilepsy, severe diabetes or hyperthyroidism.
- (5) Those with malignant tumors, hemophilia or severe bleeding.
- (6) Those with skin disease or infectious disease.
- (7) Avoid wearing metal jewelry during the treatment.
- (8) It's prohibited to use it around body parts with metal, plastic or silicon implants.
- (9) Those who have been taking anticoagulant drugs, vascular dilation drugs, or corticosteroids for a long time, or are taking now.

4. Precautions for Use

- (1) Plug with ground pin must be used, and power socket that already grounded must be ensured before using it.
- (2) To make sure equipment's voltage is adaptive. If the voltage of local power supply is unstable, we suggest users add voltage regulator with matching power between the mains supply and the equipment.
- (3) To guarantee curative effect and normal service life of the equipment, please uniformly use specified parts provided or suggested by original manufacturer.
- (4) The equipment can't be placed in damp places or near from water, and also can't be exposed to direct sunlight.
- (5) Don't place the equipment near from a strong heat source since this may affect its service life and normal use.
- (6) Please remove all the metal objects from body before treatment so as to avoid unexpected situations which may affect curative effect.
- (7) Please restrain from using the equipment aiming at eyes, thyroid, parathyroid, testicles, pregnant woman's abdomen, pacemaker, etc.
- (8) Those who are suffering from illness should use with caution unless they get

permission from a doctor.

- (9) Please turn the equipment's power switch off if no one uses it, and ensure main power is off after everything was settled, thus safety of the equipment can be guaranteed.
- (10) To use the equipment and train the operators in strictly accordance with the instructions specified in the manual.
- (11) It's advised to stop taking other weight-loss medicines for 1 to 2 months before treatment if you are taking them now. The course of treatment shall be extended if you want to have it started immediately.
- (12) Don't use the equipment with an empty stomach, and wait for at least 1 hour after a full meal before starting the course for weight reduction.
- (13) To clean the equipment with normal saline after operation so as to ensure its cleanliness and hygiene, as well as extending its service life.
- (14) When operating, fasten laser pads onto client first, then turn the equipment on, and adjust energy level (which should be set from low to high slowly in order to make client feel warm and comfortable).
- (15) When using laser pads, its whole surface should contact skin fully and can't only touch a small area.
- (16) Laser pads can be used together with massage and other beauty equipment to achieve a better effect, or they also can be used separately. Fasten them onto fat parts directly with band. It takes about 30 minutes for one treatment. A better effect can be achieved with the combined use of hands technique.

5. Troubleshooting & Solutions

- (1) The equipment can't be started, and the buttons in its back are not lighting up?
 - A. Make sure the power cord is plugged into a good power socket.
 - B. Check whether the fuse tube in its back is loose or burnt out.

- (2) Laser pads don't have energy output?
 - A. Please check whether the connecting wire is properly connected to main machine.
 - B. If the above-mentioned solutions are not working, please contact the equipment dealer for assistance.

- (3) The equipment can be started, but there is error message on the monitor?
 - A. Take out the plug in its back, and wait for about 1 minute and re-plug it and restart the equipment.
 - B. If the above-mentioned solutions are not working, please contact the equipment dealer for assistance.

6. FAQs

(1) Q: Which one is better, laser lipolysis or liposuction?

A: Compared with traditional liposuction, laser lipolysis evenly scans body parts to be treated one by one with laser power. It will not cause unevenness and instead it makes skin smooth and firm. In addition, laser used by laser lipolysis only acts on the given fat layer, which will not harm epidermis and but also speed up self-healing of elastic fibers, and maintain the firmness, smoothness and flatness of the treated parts' skin.

(2) Q: Will laser lipolysis rebound?

A: The quantity of fat cells is fixed. It increases with age increasing and becomes constant until adulthood. Weight gain is the cause of size increase of fat cells. Laser lipolysis gets rid of local fat and reduces the size of fat. It's true that seldom does laser lipolysis rebound. But it doesn't mean rebound will not occur for sure. Usually, the rebound will not happen as long as you have a rational dietary structure and don't eat and drink too much every day.

(3) Q: Does weight loss with laser need to control eating and do exercise?

A: To lose weight with laser has an obvious effect, but we can't rely on it alone to achieve this. If we don't control what we eat and instead eat and drink too much after we reduced our weight to an ideal range, it is possible that rebound will occur. Bear in mind that there is no such weight loss products can guarantee permanent effect. Therefore, weight loss with laser is just a supplement. We still have to be on a diet and do exercise properly after reached the target of weight reduction and stopped weight loss with laser.
